

Training in Gastroenterology Hepatology, and Nutrition at Boston Children's Hospital

bostonchildrens.org/GIfellowship

The Fellowship

The Harvard Medical School Fellowship in Pediatric Gastroenterology, Hepatology, and Nutrition is a three-year program that accepts up to five candidates each year. We provide trainees with an in-depth and comprehensive clinical experience followed by scholarly pursuit under the mentorship of an established investigator.

Our mission

We are dedicated to training future academic leaders who will help advance our field through the pursuit of independent and original areas of scientific inquiry or through the development of innovative programs in medical education, patient care, quality improvement, and advocacy.

Our fellows have diverse interests and career goals, including:

- » **Basic science:** cell biology, immunology, genetics
- » **Translational medicine:** pharmacology, biomarker development
- » **Clinical innovation:** quality improvement, cost effectiveness
- » **Medical education:** curriculum development, assessment tools

Opportunity for college/post- baccalaureate students

We are proud to participate in the newly developed Scribe and Mentoring for Premedical Students (SCRIPTS) Program, which aims to provide underrepresented minority and financially disadvantaged college students an opportunity to have a longitudinal mentored experience.

About us

Boston Children's Division of Gastroenterology, Hepatology, and Nutrition is part of the nation's #1-ranked children's hospital by *U.S. News & World Report*. We are at the forefront of major advances in the care and treatment of children with gastrointestinal disorders. We strive to provide a culturally diverse and inclusive environment for our patients, their families and caregivers, and our clinical, research, and administrative teams.

How to apply

We participate in the Electronic Residency Application Service (ERAS) of the Association of American Medical Colleges. Interested applicants should log onto the ERAS site to get more information about the submission process and relevant fees.

Foreign Applicants: Most fellows in our program are funded primarily through a training grant provided by the NIH, which limits eligibility applicants with American citizenship or green card status. Foreign applicants can choose to apply through ERAS for highly competitive non-NIH-funded positions in our program or to secure independent funding from principal investigators in basic or clinical research groups to complete their research training.
