Clinical Education & Informatics
family.ed@childrens.harvard.edu

How is asthma treated?

There are two types of asthma medicines: "rescue" and "controller."

- **Rescue medications** are used for **quick relief** during a flare-up.
- **Controller medicines are taken every day to keep asthma under control.** The medicine your doctor prescribes is based on your symptoms.

You were probably given an asthma action plan that will guide you in controlling your asthma. This plan includes information about prescription medicines, avoiding asthma triggers and what to do if symptoms occur.

Which type of rescue medicine do you use?

With your provider, circle the rescue medicine you are on.

Albuterol
(ProAir)

Albuterol
(Proventil)

Albuterol
(Ventolin)

Levalbuterol
(Xopenex)

I take _____ puffs every _____ hours.

Which type of controller medicine do you use?

With your provider, circle the controller medicine you are on.

Pulmicort

Qvar

Asmanex

Flovent

Advair

Dulera

Symbicort

Singular/Montelukast

I take _____ puffs every _____ hours.

I take 1 pill or sprinkles once a day.
